

613 Broadway

11th Annual House Tour

October 4, 1984

7 Robert W. Gardner House 613 Broadway Street

Gardner is remembered as the inventor of the speed governor used in steam engines. The 1873 brick house is predominantly

Second Empire in style, with some Italianate features. The architect and builder are unknown. The centered projecting pavilion, circular windows in the pavilion and dormers, and angular window brackets are Second Empire, while the gabled pavilion roof and general horizontality of the structure suggest the Italianate. All the interior woodwork—including a fine walnut staircase—is original and has been refinished.
